

Vu-Linh Le (Drew)

AI Tech Lead · Senior AI/ML Engineer · Agentic Systems · LLM Orchestration

Seoul, South Korea · levulinhkr@gmail.com · mtbox-ai.com · github.com/levulinh · Google Scholar

PROFESSIONAL SUMMARY

AI/ML Engineer with 6 years across industry and KAIST research, shipping **production agentic AI systems**. Currently leading AI engineering at Elice Group, where I designed and shipped **AI Helpy Chat** - a production multi-agent system combining web search, multimodal reasoning, quiz generation, and **interactive presentation generation** (live demo). Also built Claude-powered orchestration bots that autonomously plan, execute, and review complex engineering tasks. Previously deployed deep learning models via ONNX Runtime at Asleep Inc (30% inference cost reduction) and published three peer-reviewed papers, two in high-impact medical journals (IF > 7.0) with Seoul National University Bundang Hospital. Driven by making agentic AI systems reliable, scalable, and genuinely useful at the enterprise level.

WORK EXPERIENCE

Elice Group

2024 - Present

AI Product Squad Leader · Seoul, South Korea

- Designed and shipped **AI Helpy Chat**, a production multi-agent system supporting web search, image understanding, multimodal reasoning, AI quiz generation with extracted learning objectives, and **interactive presentation generation**.
- Built **Claude-powered multi-agent orchestration bots** that autonomously plan, execute, and review complex engineering tasks - transforming AI workflows across the engineering organization.
- Fine-tuned LLMs (0.6B-32B) on **A100/H100 GPUs** for Korean language and educational contexts.
- Shipped a **government-approved RAG chatbot** for Korea's AI Digital Textbook programme, meeting official approval criteria for production deployment.
- Built a **VLM-based OCR model** under 1B parameters for complex table parsing, outperforming larger VLMs and closing a commercial deal with Hyundai.
- Mentored junior engineers on multi-agent design patterns, eval frameworks, and production AI deployment.

Asleep Inc

2022 - 2024

AI Research Scientist · Seoul, South Korea

- Led **ViT-based AHI estimation** reaching 94% accuracy; deployed models via ONNX Runtime, cutting inference cost by 30%.
- Designed a **single-body multi-head architecture** combining multiple sleep-analysis tasks in one model, cutting inference time by ~50%.
- Developed sound-based deep learning models for sleep disorder detection (apnea, snoring, sleep staging) at clinical-grade accuracy.
- Co-authored two peer-reviewed papers (IF > 7.0) with Seoul National University Bundang Hospital: real-time OSA detection via smartphone audio (JMIR 2023, first author) and a home PSG-validated screening study (JAMA Otolaryngology 2024).

PERSONAL PROJECTS

BlogForge

MULTI-AGENT

github.com/levulinh/blogforge

Automated multi-agent CLI that researches, drafts, critiques, and publishes Jekyll blog posts. Orchestrator delegates to researcher, writer, and critic agents with automatic revision cycles when quality scores fall below threshold.

OpenAI Agents SDK · OpenRouter · Tavily · Python · Jekyll

MTBox

AUTONOMOUS AGENTS

github.com/levulinh/mtbox

Autonomous AI software company: five specialized Claude Code agents (CTO, PM, Designer, Programmer, QA) collaborate on scheduled intervals via Linear and GitHub to plan, design, implement, and test software. Human CEO steers product direction through Linear directives.

Claude Code · Linear MCP · Playwright · Flutter · TypeScript · launchd automation

Voca Flutter

LANGUAGE LEARNING

github.com/levulinh/voca-flutter

Vocabulary learning app that turns real-world articles into structured learning material. Built to accelerate my Korean learning.

Flutter · Dart · LLM integration

Clozy

CONSUMER AI

App Store

AI journaling iOS app that helps users reflect through guided prompts and LLM-generated insights.

iOS · LLM integration

EDUCATION

M.S. Electrical Engineering - KAIST

2019 - 2022

Daejeon, South Korea · GPA 3.8 / 4.3 · Graph neural networks for computer vision (IEEE ICTC 2021, first author)

B.S. Automation & Control Engineering - Hanoi University of Science and Technology

2014 - 2019

Hanoi, Vietnam · GPA 3.2 / 4.0 · Top engineering institution in Vietnam

CERTIFICATIONS

NVIDIA Deep Learning Institute - Rapid Application Development with Large Language Models (LLMs)

Certified Instructor · Jul 2024

NVIDIA Deep Learning Institute - DLI Platform Course for Instructors

Jul 2024
